SAVING SENIORS’ LIVES, ONE FALL AT A TIME

95% of seniors prefer to live in their own home – even when faced with declining health. Roughly one in every four US households currently provides some level of care for an independently living senior.

However, living at home has risks. Statistically, 40% of all seniors will fall this year. Falls represent about 70% of accident-related deaths among seniors (65 and older). For existing “panic button” devices (Personal Emergency Response Systems) to work correctly, your loved one must be conscious and able to press a button.

WHO WE ARE

Halo Monitoring™ provides remote health monitoring to address concerns of a large and growing population.

Unlike products which require seniors to manually press a “panic button”, myHalo™ automatically detects serious health issues – even a user falling. Problems may include for example, a user falling, a highly elevated temperature or an extended, accelerated pulse rate. All user vitals are displayed on a password-protected, secure website while alerts are delivered via text messages, e-mail, or a phone call from our 24/7 professional call center.

THIS IS LIVING!

Imagine a solution that reduces caregiver anxiety and allows the senior to age at home gracefully. With myHalo™ they know their caregiver(s) will respond to problems vs. an immediate EMS response of a panic device action. Our solution allows them their independence, while offering caregiver(s) peace-of-mind knowing they are okay. Imagine a caregiver no longer having to worry when the senior doesn’t answer the phone. Imagine the ability to see that they are okay simply by logging into a web portal anytime, from anywhere in the world. Imagine a system so advanced that if they do fall, the caregiver will know instantly and automatically.
Peace of Mind for Seniors

Seniors can choose to have their loved ones respond first...before EMS is dispatched

- No conscious action needs to be taken by the senior; automatic monitoring
- Advanced fall detection alerts
- No computer required
- Tracks vital signs, activity, asleep and awake patterns
- 24/7 call center monitoring
- Cell phone, text messages and e-mail alerts
- Easy-to-read Web interface
- Comfortable wireless monitoring strap
- Panic button included

Employing innovative technology and intelligent wearable sensors, we automatically detect falls, remotely monitor and detect issues before they become problems

It’s time for everyone to rest easier
