

## **Gardening: Saving You Money**

By Eli Legan

West Elementary School, Great Falls, MT

Gardening. Why do people do it? To save money. The community needs to take action! Get out your yummys and compost them into soil. Use the soil to garden.

Gardening is good for your school. Growing your own food saves money and you have fresh fruit, flowers, and vegetables. We could use the fruit and vegetables for lunch and snack. The students could use the flowers for art and to make school fancier.

Composting 101...You need composted soil to garden to make your soil richer. In order to make the soil you need to know what can be composted. Yummies by definition are things worms like to eat. For example, sweets, fruits, vegetables, bokashi , and greens. Yuckies are things that worms don't like to eat. For example, meat, dairy, orange peels, and absolutely no citrus.

So why do people compost and garden? To save money. Get out your shovels and hoses and get to work. You want fresh fruit? What are you doing when you grow something? Gardening.
